Paper Reading Vlog Guidelines

- Choose a research paper on LLMs or its direct applications published in A* venues (e.g. ICML, ICLR, Neurips, EMNLP, CVPR, ICCV, ECCV etc.) within the duration 2025 onwards.
- Create a video blog of up to 15 minutes. (Minimum 10 minutes)

Find out a paper which you want to read/present for your paper reading component. Please make sure that it has open-source code, and the paper is from a CORE A* conference. If in doubt, feel free to contact me.
It is in a group.

CORE: https://portal.core.edu.au/conf-ranks/

Expected Deliverables:

- Explain the core technical contributions of the research paper. For example: Core methodology introduced, application innovation etc.
- Implement the method in python using required libraries end-to-end. Your method code should be ready to take the input data and produce the required output. (Check by creating very small toy data for the paper)
- Explain the code in the video blog clearly.

Note: You can choose to explain in the video blog using code and paper combined.

What to Submit:

- Video link: must be accessible to the Instructors and TAs for evaluation.
- Code file either .py or .ipynb or if you have created/cloned **GitHub** repo for the blog.
- Put these links or files in a pdf. Zip it and submit.
